MATH 111 Calculus 1, NUU, FALL 2026

Dr. Salnikova Chekeres **Quiz 2 · Continuity and limits at infinity (1.8, 3.4)**

10

15 minutes. 10 points. No notes, no calculators, no phones. Write your answers in the spaces provided and show all your work. Write "DNE" if a limit does not exist.

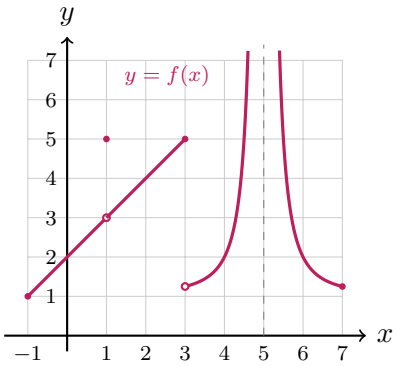

Name: _____

ID: _____

1	2	3	Total

Problem 1 *Reading a graph.* **[4 points]**

The graph of a function f is shown; the dashed line is a vertical asymptote. Answer each of the following.

(a) $\lim_{x\to 1} f(x) =$ _____

(b) $f(1) =$ _____

(c) The numbers at which f is discontinuous: _____

(d) At which of them is the discontinuity *removable*, and what value of f there would remove it?

_____

Problem 2 *From the lectures.* **[2 points]**

(Question 13 of Lecture 6, word for word.) Circle one letter, and show the calculation that gives it.

Which lines are *vertical* asymptotes of $y = \dfrac{x-1}{x^2-1}$?

A. $x = 1$ only. **B.** $x = -1$ only.

C. Both $x = 1$ and $x = -1$. **D.** Neither.

Calculation:

Problem 3 *An existence argument.* **[4 points]**

Show that the equation $x^3 - 6x + 2 = 0$ has a solution in the interval $(0, 1)$.

Write the argument in full: name the function, say why it is continuous, give the two values, and state the conclusion.
